

StylePlus commands

All StylePlus commands only work in a “Style Text” areas -- These are areas that you can apply formatting (e.g. bold, etc.)

Mark all commands with “Ignore Formatting” (cmd-.) to keep RapidWeaver from inserting HTML into the command

Command	Effect	Example	notes
@import((page name))	Imports a page into the current page	@import((About Me))	For best results make sure both the page being imported and the page importing into are in their own folders
@gdoc((key))	Includes a google document inline	@gdoc((ah4jzqpk89pj_13fc583j))	You must use PHP to import. See here for more details.
@gtable((...))	Includes a google spreadsheet	@gtable((key:pegfyTc8f6LYQpwkWvmq-Dg,id:my-phone-table,header:true,html:Name;Description Comments))	See here for more details
@gform((...))	Imports a google form	@gform((key:pegfyTc8f6LYH3togWa2AWQ))	See here for more details

Lightbox,FancyZoom & Fancy Box

PlusKit includes three different 'lighbox' effects. Which one you pick is a function of personal taste (they all look a little different) as well as page compatibility.

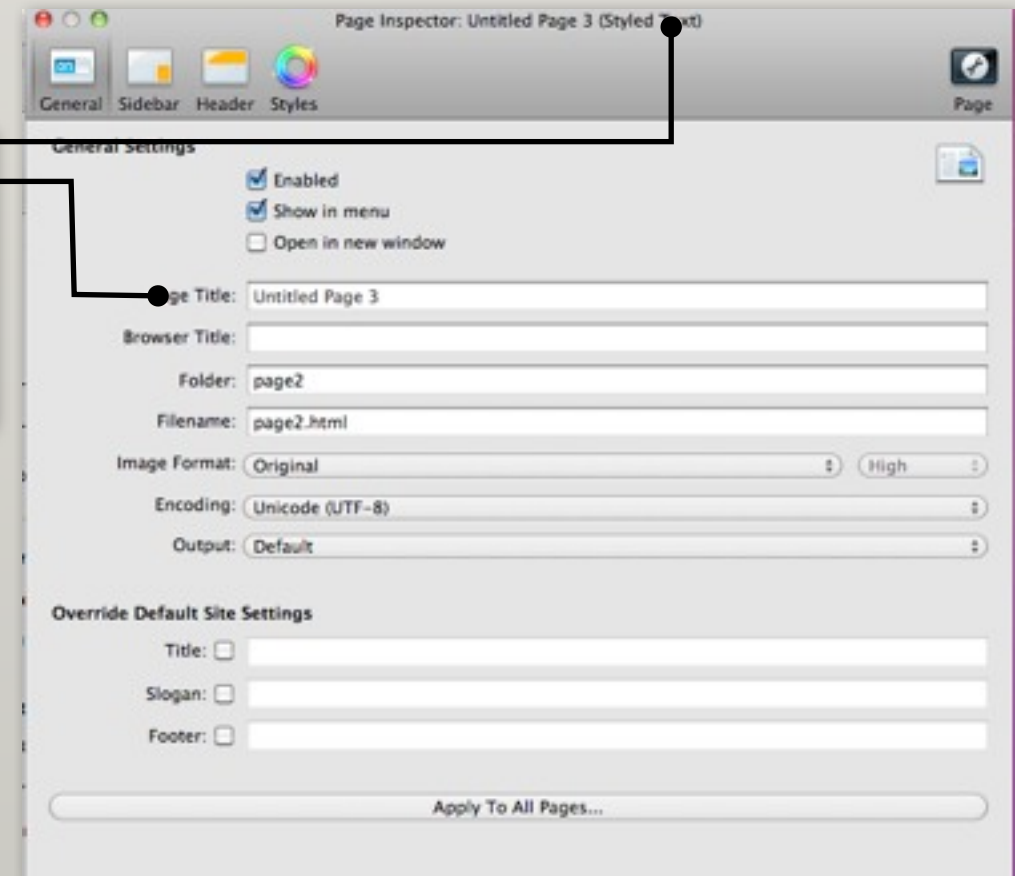

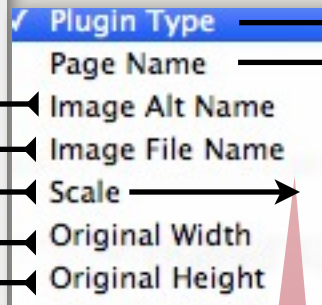

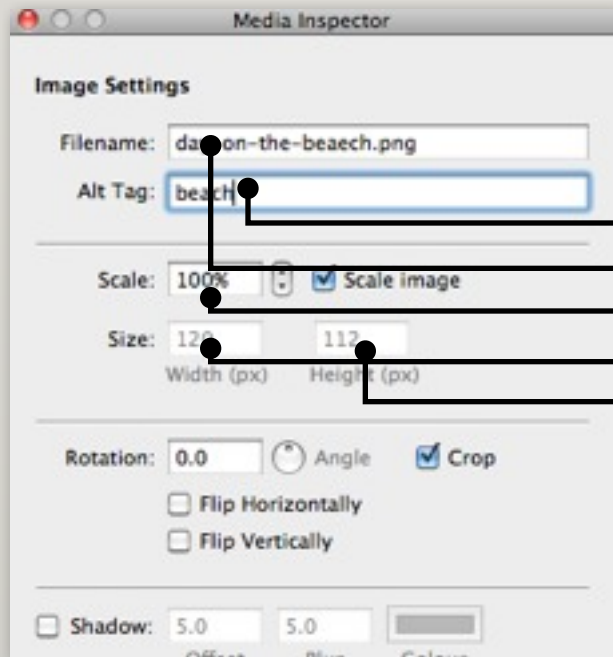

By page compatibility I mean that all of the libraries insert javascript and with modern rapidweaver pages it's often the case that there are multiple javascript libraries being combined. In some cases they conflict and just don't work.

The good news is between the three below you should be able to find one that works for you.

Name	Javascript Library	License	Notes
Lightbox	Moo	Free	
Fancyzoom	Custom Type to enter text	Free for personel (license for commercial site costs money)	
Fancy Box	jquery	Free	Includes option panel

Lightbox, FancyZoom & Fancy Box (Triggers)

Recommended Lightbox

"Scale < .70"

Important!

Scale in the trigger is entered as a number so .50 = 50%!

Entering a number bigger than 1.0 will trigger all images!

Insert on Page

About

This feature let's you insert arbitrary HTML on pages that contain styled text. While most pages have styled text areas there are some plugins that do not (such as the contact form).

It's the styled text area that let's PlusKit work

Define Trigger

Multiple Criteria can be "Or" or "And"

See next page for more details on Triggers

How To Use

Add a snippet and define the:

- Trigger
- snippet content
- how often
- location

The screenshot shows the 'Insert-on-page' configuration window. It has tabs for 'Backups', 'Styled Text Plus', and 'Insert-on-page'. The 'Insert-on-page' tab is active, showing a table with columns: Trigger, Snippet, How often, and Location. The first row contains 'Page Slogan contains', 'Hello From Pluskit!', 'Once', and 'Bottom (Sidebar)'. Below the table is a large text area for HTML content, currently containing 'Hello From Pluskit!'. At the bottom, there are buttons for 'Trigger' and 'Insert at bottom (Sidebar)', and a checkbox for 'Insert once per page' which is checked. Annotations with lines point to various parts of the interface: a line from 'Trigger' points to the 'Trigger' column header; a line from 'snippet content' points to the 'Snippet' column header; a line from 'how often' points to the 'How often' column header; a line from 'location' points to the 'Location' column header; a line from 'HTML Content' points to the large text area; a line from 'Insert Once' points to the 'Insert once per page' checkbox. A dropdown menu is open below the 'Trigger' button, showing options: Plugin Type, Page Title, Folder, File Name, All Pages (checked), Text (Main), Text Main (HTML version), Text Main (And Replace), Text Sidebar, Text Sidebar (HTML Version), Text Sidebar (And Replace), (Overridden)Title, (Overridden)Footer, (Overridden)Slogan, and Parent Page Title(s).

Trigger	Snippet	How often	Location
Page Slogan contains	Hello From Pluskit!	Once	Bottom (Sidebar)

Trigger Insert at bottom (Sidebar) ☒ Insert once per page

1 Hello From Pluskit!

Plugin Type
Page Title
Folder
File Name
✓ All Pages
Text (Main)
Text Main (HTML version)
Text Main (And Replace)
Text Sidebar
Text Sidebar (HTML Version)
Text Sidebar (And Replace)
(Overridden)Title
(Overridden)Footer
(Overridden)Slogan
Parent Page Title(s)

HTML Content
The HTML content that will be inserted is entered here.

Insert Once
Selecting this means this particular snippet will only insert once regardless of how many styled text areas there are on the page

Insert on Page (Triggers)

All pages with "Styled" text

Plugin Type
Page Title
Folder
File Name
✓ All Pages
Text (Main)
Text Main (HTML version)
Text Main (And Replace)
Text Sidebar
Text Sidebar (HTML Version)
Text Sidebar (And Replace)
(Overridden)Title
(Overridden)Footer
(Overridden)Slogan
Parent Page Title(s)
